

**Thank you for purchasing a Mustard Bikes Fender Eliminator.
The following is a brief guide for installation of your
11-15 Kawasaki ZX10R Fender Eliminator.**

1. Remove pillion seat using the key.
2. Disconnect the brake light plug for better access.
3. Locate and disconnect the number plate light plug. The wire comes from the lower tube from the stock fender.
4. Remove 2 bolts holding the stock fender tube brackets in place, along with their clamping brackets.
5. Gently remove the stock fender by sliding it backwards. Be careful not to snag the number plate light plug.
6. Mount 2x supplied support rods into the top two holes left by the stock fender until they are flush with the under-tray. Use the two original bolts to loosely secure the support rods.
7. Feed fender eliminator wiring through lower hole and mount fender eliminator using two supplied bolts. The use of a light to medium strength Loctite is recommended.
8. Plug in LED bolt and check for operation. If it does not light up switch the wires around and check again.
9. Tighten support rod bolts. Refit brake light plug and check for correct operation before fitting pillion seat.

If you have any problems with installation feel free to contact us at help@mustardbikes.com for any queries.
